1.8.2023

General description of the product
Dog car safety harness

Product features that are important for assessing safety
When choosing the materials and structures of the product, special attention has been paid to their durability and safety.
The tensile strength of the product has been tested.

Information to show that the product is safe
The product does not pose a danger to the consumer or the dog under normal conditions of use.
The tensile strength of the harness has been tested under laboratory conditions according to standard SFS-EN ISO 13934- 1, and it meets the harness strength requirements defined by Hurtta.
Dynamically crash tested under the test conditions of ECE R44.04 in Finland (Oy Klippan AB) and China (CATARC Automotive Component Test Center Co.,Ltd)

Ways to eliminate/reduce risks
Before and after each use, inspect the harness for any signs of ageing or damage. The broken product must be replaced with a new product. The harness must always be replaced after an impact.

The effect that other products can have that are used together with the product
Carefully check that the product you intend to use together with the Hurtta product is safe, compatible and does not cause harm to the Hurtta product.

Guidance needed
Children and vulnerable consumers require guidance and supervision when using the product.
